

# AUTOMATION, EDGE COMPUTING AND ARTIFICIAL INTELLIGENCE

for drones and  
ground robots

# Lorenz Technology

*Manage a global drone and ground robot fleet in multiple locations*

Lorenz Technology provides a platform for intelligent management of UAVs and UGVs.

With the Lorenz AI-Link® mounted on a drone or ground robot of your choice, the control of your vehicle and its data collection can be automated using the web interface of the Lorenz Hive.

The Lorenz Technology software lets you plan missions, routes and objectives for your UAVs and UGVs as well as intelligently analyze your data collection through automation processes, edge computing and artificial intelligence (AI).

Welcome to the future of UAV and UGV technology!

ONE LORENZ HIVE

MULTIPLE UAVs & UGVs  
IN SEVERAL LOCATIONS

## Automation of workflows

Lorenz Technology lets you manage multiple drones and ground robots in several locations, all in one interface.

Your data processing and manual workflows can be automated intelligently. The Lorenz platform provides a secure and smart way of data sharing, storing and archiving the video data collected from UAVs and UGVs.

CREATE A DRONE TASK  
FROM ANY DEVICE

ONE DRONE CAN OPERATE  
IN SEVERAL LOCATIONS

PRESS OF A BUTTON

INSTANT DATA UPLOAD  
TO THE CLOUD

# Lorenz AI-Link®

Lorenz AI-Link® acts as a brain for UAVs and UGVs. By connecting it to our control system, the Lorenz Hive, you are able to plan autonomous routes and real-time stream the video directly from your drone or robot to the web interface of the Lorenz Hive across both longer and shorter distances.

### Edge Computing

The onboard data processing enables analytics and automated detection based on AI.

### 4G Connectivity

The 4G connection shares data with Lorenz Hive to complete autonomous routes and real-time video streaming.

### Weatherproof

The Lorenz AI-Link® is suited for harsh weather conditions graded IP54.

### Sensor Integration

Input from sensors are possible. E.g. IR, Optic, Thermal, Gas, etc.

# Lorenz Hive

Lorenz Hive is a simple all-in-one software solution with a web-based interface, offering multiple advanced features and applications.

Lorenz Hive allows you to plan routes, manage perimeters, receive, watch and share real-time videos. Record data and archive them for intelligent processing. Stream optic and thermal videos in real-time with sub-second latency. Operate in multiple locations with several drones and robots.

Manage multiple devices in one interface, using the Lorenz Hive!

### Real-Time Streaming

The video from Lorenz AI-Link® is streamed directly to Lorenz Hive with sub-second latency.

### Cloud Platform

Lorenz Hive is a cloud-based service, allowing access to collected data from any location.

### Data Collection

All types of data are collected, stored and easily accessible in the cloud of Lorenz Hive.

### Report Generation

All videos can be analyzed and incidents easily subtracted in a separate report for download.

### Data Sharing

System integration with other data systems is possible.

### Tablet Control

The drone is controlled in the Lorenz Hive web interface using a tablet.

### Geofencing

Restricts the drone to stay within a defined perimeter, making inspections much easier.

### Logbook

Operator, date, location and data are automatically generated in a logbook for each flight.
